

Index

- 3D-Var, 20, 52–68, 238
 - FGAT, 65
 - incremental, 64
- 4D-LETKF, 205
- 4D-Var, 12, 21, 51–68, 241
 - incremental, 51, 64, 146–148
 - multi-incremental, 147
 - operation, 238
 - reduced, 150–152
 - strong constraint, 55
 - weak constraint, 56
- 4D-Var-Ben, 205
- 4DEnVar, 12, 203–207, 238

- acoustics, 257–259
- adjoint method, 33–52
 - aerodynamics, 254
 - data assimilation, 52–67
 - finite-dimensional, 46–49
 - introduction, 18–19
- adjoint model, 19, 159, 160, 197, 203, 207, 209, 215
- aerodynamics, 254
- alpha control variable, *see* localization
- anharmonic oscillator model, 160
- applications
 - fermentation processes, 261
 - LPDE (low density polyethylene), 261
- assimilation in the unstable subspace (AUS), 177
- asymptotic observer, *see* nudging
- atmospheric constituents, 240–242
 - air pollution, 240
 - emissions, 240
 - greenhouse gases, 240
 - radionuclides, 241
- augmented state, 199
- AUS, *see* assimilation in the unstable space
- automatic differentiation, 33, 47, 49–50, 256

- back-and-forth nudging (BFN), 127–132
- Bayes’ law, 80
- Bayes’ theorem, 75, 80
- Bayesian, 1, 73
- best linear unbiased estimator (BLUE), 15, 20, 81, 89, 93, 241
- BFN, *see* back-and-forth nudging
- biomechanics, 260
- Black-Scholes equation, 42, 264
- BLUE, *see* best linear unbiased estimator
- BOLD, *see* blood oxygenation level-dependent
- Brownian motion, 263
- Burgers’ equation, 43

- calculus of variations, 26–33
- cardiac electrophysiology, 253
- CFD, *see* computational fluid dynamics
- chemical processes, 261–262
- chemistry, 261–262
- computational fluid dynamics (CFD), 254–256
- computed tomography (CT), 257
- convection-diffusion equation, 18, 36, 38
- covariance, 77
- covariance matrix, 66
 - frozen, 98
 - problem size, 98

- covariant matrix
 - reduction, 140
- curse of dimensionality, 102, 140

- DA, *see* data assimilation
- DAE, *see* differential algebraic equation
- deterministic ensemble Kalman filter (DEnKF), 162–167, 175
 - (Sakov and Oke’s variant), 175
- differential algebraic equations (DAEs), 261
- diffusion equation, 42
- directional derivative, 19
- discrete adjoint, *see* automatic differentiation
- duality
 - state and observation, 186
- Duffing’s equation, 10
- dynamic initialization, *see* nudging

- earthquake detection, 246
- EDA, *see* ensemble of DA
- EFD, *see* experimental fluid dynamics
- EKF, *see* extended Kalman filter
- electrocardiogram, 253
- electrocardiography, 253
- empirical orthogonal functions (EOFs), 136
- EnKF, *see* ensemble Kalman filter
- EnKS, *see* ensemble Kalman smoother
- ensemble adjustment Kalman filter (EAKF), 174
- ensemble Kalman filter (EnKF), 146, 153–193

- anomalies, *see* perturbations
 applications of, 193, 248, 256, 265
 geomagnetism, application to, 248
 left transform, 166
 maximum likelihood filter, 178
 operation, 238
 perturbations, 158
 Potter scheme, 175
 principle, 156
 right transform, 165
 sampling errors, 167, 172
 ensemble Kalman smoother (EnKS), 189, 241
 ensemble of data assimilations (EDA), 202–203
 ensemble square root Kalman filter, 162
 ensemble subspace, 159, 163–165, 178, 185, 190, 204, 208
 ensemble transform Kalman filter (ETKF), 163
 ensemble variational methods (EnVar), 51, 99, 195–215, 256
 EnSRKF, *see* ensemble square root Kalman filter
 EOF, *see* empirical orthogonal functions
 error diagnostics, 241
 error growth, 238
 estimator, 78–82
 unbiasedness, 78
 ETKF, *see* ensemble-transform Kalman filter
 Euler equations, 254, 256
 Euler–Lagrange equation, 30–32
 expectation, 80
 conditional, 80
 expected value, 76
 experimental fluid dynamics, 255
 extended Kalman filter (EKF), 99, 141, 153, 233, 249, 260
 FGAT, *see* first guess at approximation
 finance, 263–264
 finite-size ensemble Kalman filter (EnKF-N), 181, 182, 186, 187
 fluid structure interaction (FSI), 252
 fMRI, *see* functional magnetic resonance imaging
 forward/backward Lyapunov vectors, 136
 FSI, *see* fluid–structure interaction
 full waveform inversion, 247
 functional magnetic resonance imaging (fMRI), 252
 FWI, *see* full waveform inversion
 Gaspari–Cohn function, 168, 169
 gauge fixing, 178
 Gaussian distribution, 78
 geodynamics, 248–249
 geomagnetism, 248
 hemodynamics, 252
 hierarchical ensemble Kalman filter, 183
 hindcasting, 249
 HPC, *see* high-performance computing
 hybrid methods, 197–202
 hyperprior, 183, 185
 Jeffreys, 184
 normal-inverse-Wishart, 186
 IEnKF, *see* iterative ensemble Kalman filter
 IEnKS, *see* iterative ensemble Kalman smoother
 ill-posed, 6
 imaging, 257–259
 multimodal, 257
 inflation, 171–172
 additive, 172
 multiplicative, 172
 inner loop, 180
 innovation, 18, 54, 93
 innovation vector, 61
 integral equations, 32
 inverse modeling, 241
 iterative ensemble Kalman filter (IEnKF), 159, 207
 iterative ensemble Kalman smoother (IEnKS), 159, 207–215
 Kalman filter, 16, 90–115
 collapse, 99
 convergence, 96
 divergence, 97
 stability, 96
 Kalman gain, 18, 93
 Karhunen–Loeve decomposition, *see* empirical orthogonal functions
 KF, *see* Kalman filter
 kriging, 89
 Lagrange multiplier, 27, 39
 land-use and transportation integrated (LUTI) models, 266
 LDPE, *see* low-density polyethylene
 Legendre condition, 30
 LETKF, *see* local ensemble transform KF
 linear least-squares estimation (LLSE), 81
 Liouville equation, 206
 local ensemble transform Kalman filter (LETKF), 171
 localization, 167–171
 alpha control variable, 182–183, 201–202
 covariance localization, 169, 201
 covariant localization, 206, 215
 domain localization, 167
 dynamically consistent, 205
 four-dimensional, 205
 local analysis, 167
 Schur localization, 169, 201
 surrogate model, 206, 215
 Lorenz model, 172, 180, 187, 192, 195, 210
 LTI, *see* linear time-independent
 Luenberger observer, *see* nudging
 Lyapunov vectors, 136
 magnetic resonance imaging (MRI), 257
 MAP, *see* maximum a posteriori estimator
 matrix shift lemma, 166
 maximum a posteriori (MAP) estimator, 75
 maximum likelihood estimation, 79

- mean, 76
mechanics, 259–261
minimum variance linear estimator (MVLE), 82
ML, *see* maximum likelihood
MLEF, *see* maximum likelihood ensemble filter
mode, 77
model error, 66, 153
 covariance matrix, 153
 inflation, 172
 perturbations, 156, 202
model reduction, 133–142
mollified ensemble Kalman filter, 176
multigrid methods, 148
multiple data assimilation, 211
MV, *see* minimum variance
- Navier–Stokes equation, 43, 254, 256
Newtonian relaxation, *see* nudging
Newton’s method, 9
nuclear tests, 246
nudging, 50, 121–126
 application to electrocardiography, 253
 back-and-forth, 127
 backward, 126
 optimal, 123
 spectral, 125
numerical weather prediction (NWP), 43, 237–240
NWP, *see* numerical weather prediction
- OI, *see* optimal interpolation
oil and gas exploration, 246
oncogenesis, 252
optimal control, 18, 33
optimal interpolation (OI), 50, 89, 90, 98, 197, 221, 248
optimization, 3
 BFGS (Broyden–Fletcher–Goldfarb–Shanno) method, 262
outer loop, 207
- particle filter, 100–103, 157, 263, 265
 application in finance, 264
 bootstrap, 100
 implicit, 102
 resampling, 101
- PCA, *see* principal component analysis
PDF, *see* probability density function
penalization, 9
POD, *see* proper orthogonal decomposition
preconditioning, 65
predictability, 238
 empirical model, 238
 horizon, 238
principal components, *see* empirical orthogonal functions
probability, 73, 76, 79
 conditional, 73
 conditional density function, 79
 density function, 76
 distribution function, 76
 function, 76
 marginal density function, 79
 posterior, 73
 space, 76
proper orthogonal decomposition (POD), *see* empirical orthogonal functions
quasi-static variational assimilation (QSVA), 211, 215
- random variable, 76
 continuous, 76
 discrete, 76
reaction-diffusion equation, 251, 253, 262
reduced methods, *see* model reduction
reduced-order 4D-Var, 204
reduced-order unscented Kalman filter (ROUKF), 252
reduced-rank square root filter (RRSQRT), 154–156
reduction
 model reduction, 133–142
 reduced basis, 133
regression, 3
regularization, 9, 33, 35, 124, 195, 254
regularized cost function, 179
rms, *see* root mean square
- RMSE, *see* root mean square error
RRSQRT, *see* reduced-rank square root filter
- SDE, *see* stochastic differential equation
SEEK, *see* singular evolutive extended Kalman filter
SEIK, *see* singular evolutive interpolated Kalman filter
seismology, 245–247
sequential Monte Carlo, 100
 application in economics, 263
serial ensemble Kalman filter, 174
shape optimization, 256
Sherman–Morrison–Woodbury formula, 54, 164
single data assimilation (DA), 211
singular evolutive extended Kalman filter (SEEK), 142–145, 151
singular evolutive interpolated Kalman filter (SEIK), 145
singular value decomposition (SVD), 134
singular vectors, 134
 forward/backward singular vectors, 135
smoothing, 189
stochastic ensemble Kalman filter, 157–161
systems biology, 253–254
- tangent linear model (TLM), 19, 35, 36, 40, 154, 159, 179, 190, 203, 206, 209
three-variable Lorenz model, 187
time domain electromagnetics (TDEM), 246
TLM, *see* tangent linear model
tomography, 10, 42
toy model, 23, 172
traffic control, 264–265
tumor growth, 251
twin experiment, 22, 151, 173, 248
